Madison, WI (open to relocation) | (608) 960-3376 | kapur04karan@gmail.com | linkedin.com/in/karankapur5 | github.com/karank2512 | karankapur.com

Education

University of Wisconsin-Madison Madison, WI

Bachelor of Science in Computer Science and Data Science, Minor in Entrepreneurship *May 2026*

- OpenAI Open Source Contributor Fellowship; SAIL x OpenAI Fellow; First place, Transcend UW; 3x solo founder

Experience

Data Analyst, Application Development 08/2026 - Present

Wisconsin Union *Madison, WI*

- Shipped a **production** scheduling app in **2 days** that **replaced the team's legacy software**: **250+ employees** now run **4,400+ shifts** on it, and I **owned it end to end**, from shift management and self-serve accounts to work chat and deployment, built to stay up when many employees schedule and chat at once.

Software Engineer Intern 01/2026 - 05/2026

Eurofins Scientific *Madison, WI*

- **Embedded** with Eurofins lab technicians across **4+ business units**: learned their workflows through **customer discovery**, built what they needed, and owned it from **discovery to deployment**; they **still use it**.
- Turned **100K+ messy lab records** into forecasts with **confidence intervals**: Python ETL, PostgreSQL, FastAPI **batch inference**, React and TypeScript front end.

Software Engineer 06/2025 - 08/2025

OpenAI x UW-Madison SAIL Program *Madison, WI*

- Built a **GPT-4 RAG platform** for UW-Madison IT (LangChain, Pinecone, C# WebSockets) that **cut manual lookup 40% and cloud cost 25%** for **60+ users**, serving **50+ concurrent queries at sub-2s latency**.

Computer Support Assistant 01/2025 - 05/2026

UW-Madison, Department of Electrical & Computer Engineering *Madison, WI*

- **Diagnosed and resolved 1,000+ user issues at 98% satisfaction** across Windows, macOS, and Linux, and **cut downtime 40%** with PowerShell **log-analysis** automation across **1,500+** computers and servers.

Projects

Foreman | Solo Founder & Engineer | *Agentic workforce platform* | **github.com/karank2512/Foreman** 09/2026

- **Open-sourced an agentic workforce platform used by 25+ users** where a plain-English job becomes a versioned AI worker with per-call **human approval**, spend caps, **evaluations on every run**, and a Postgres queue with leases for **crash recovery**.

RelayIQ | Solo Founder & Engineer | *Python, FastAPI* | **github.com/karank2512/RelayIQ** 07/2026

- Used by **100+ users** to decide which leads deserve enrichment spend and what is good enough for the **CRM**. Built as a multi-step **agent** with idempotent **webhooks** and **CRM** writes, **human escalation**, retries and **circuit breakers**; **302 automated tests** with CI.
- Tested whether the agent's confidence deserved trust (**Brier 0.164, ECE 0.091** on synthetic truth), found overconfidence above 0.8, and in a 495-case **synthetic benchmark** routing and caching used **3.3x fewer credits per usable lead** (13.24 vs 4.07).

tell | Solo Founder & Engineer | *Explainable buying-signal pipeline* | **github.com/karank2512/tell-ai** 10/2026

- Built the pipeline that turns **job boards, SEC filings, and news into buying signals**: **40+ clients** tracked funded companies and found customers with it and reported **closing deals**. A production audit caught similar company names creating **false SEC filing links**; fixed with entity checks and **manual review**.

thaw | Co-Founder & Cloud Storage Engineer | *Open-source LLM inference* 04/2026 - Present

- **Co-founded an open-source LLM inference startup** (Rust, CUDA, vLLM) with N. Matteson and M. Yu: a four-branch fork round runs in a **0.88s median** on an H100 (Llama-3.1-8B) versus ∼**340s** cold boot; **I own the storage layer**.

Technical Skills

AI and Agents: **AI agents**, LLM **tool calling**, agent orchestration, evaluations, **Claude Code and Codex daily**
Languages and Stack: **Python**, **TypeScript**, Rust, SQL, React, Node.js, FastAPI, PostgreSQL, MySQL, WebSockets
Customer Delivery: **customer discovery**, REST **APIs**, **webhooks**, Linux, PowerShell, Docker Compose, AWS, CI
